Professional Summary

I'm a first year floor covering apprentice with 9 months of work experience since I started in the union I've worked on projects such as The he Federal building down town, Bone county, Downtowns event center, Westfield medical offices, Riley's children hospital, and etc no need to list where all I've worked but the point I'm trying to be make is that I'm adaptable no matter who I'm working with or where I'm working my goal is the same to get the job done and go home I show up ready to work and once I've completed one task I move onto the next when I'm out in the field my work ethic is semi robotic the way that I hardly break focus from my work only slowing down when interrupted or for mandated breaks.

Since beginning as a floor cover with little to no knowledge on the subject I've quickly picked up on things due to my adaptive and curious personality I love to learn new things and have a close attention to detail that I've put to use since I've started I've learned how to install carpet tile, lvt, vct, and vinyl although I haven't yet gotten the experience to do any heat welding and outside of installation I'm trained on cleaning and prepping we do before installation and can prep as well do cove base and straight base.

I'm confident that with the opportunities I have the potential to do great work and I enjoy my job and the work I've done so far I feel the best days are the ones when you can just show up already knowing what you need to do for the day get it done and go home no fuss no cuss no rush not all days are that perfect but when you love what you do everyday is still enjoyable being a bit of a rookie I'm not the fastest nor am I best but I put forth my best effort every day to strive to be the best that I can be

Work Experience

Floor cover

American floor cover-Indianapolis, IN

July 2024 to Present

American has some great journeymen that had me laying floors from day one. while employed with American I've made supply deliveries to other jobs, installed a bunch of different kinds of floor patterns and materials; and based cove base and straight base in addition to that I'm still learning and being taught new things everyday that I'm in the field.

Education

High school student in Carpentry

Atterbury job corps - Edinburg, IN

January 2013 to July 2024

While at Atterbury I learned how to use power tools and obtained the soft skills necessary to do carpentry/construction work
